

PSD520075 v1.0 PSD 52V/0,75A Desktop type power supply for CCTV

Edition: 1 from 29.02.2021 Supercedes the edition: ------

EN

Features of the power supply unit:

- power output 0,75 A/52 V DC^{*}
- universal input voltage range ~100 240 V
- high efficiency (to 90%)
- standby power <0,1 W

- efficiency level: VI
- protections:
 - SCP short-circuit protection
 - overvoltage protection (AC input)
 - overload (OLP)
- warranty 2 years

1. Technical description.

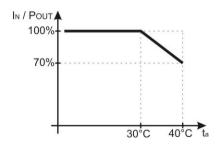

1.1. General description.

The power supply is intended for supply cameras that require stabilised voltage of **52 V DC.** The unit has a cable with a DC5.5/2.1 plug. The power supply unit is protected against short-circuit, overload and overvoltage.

1.2. Technical parameters

~100 – 240 V; 50/60 Hz
1 A
40 W max.
90%

52 V DC
0,75 A - refer to graph 1.
0,53 A - refer to graph 1.
250mV p-p max.
electronic, automatic recovery
150-200% of power supply, automatic recovery
Temperature: -10°C ÷ +40°C relative humidity 20%90%, without condensation
83 (97) x 48 x 31 [mm]
0,24 / 0,26 [kg]
II (second)
1,2m + plug DC5,5/2,1 female
1,5m + mains plug
-20°C+60°C
CE, 2 years

^{*} In order to extend the life of the power supply, the load current of 0,53 A is recommended.

Graph 1. Relation between output current and ambient temperature (instantaneous load).

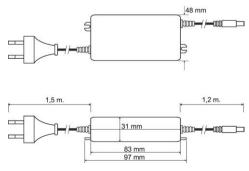

Fig.1. Dimension of power supply.

Refer to graph 1

1.3. Accessories.

For power supplies are available accessories - fuse blocks and cable adapter. For details -visit www.pulsar.pl.

2. Installation.

2.1. Requirements.

The power supply shall be mounted by the qualified installer having appropriate (required and necessary for a given country) permissions and qualifications for connecting (operating) low-voltage installations. The power supply shall be mounted in closed rooms of the normal air humidity (RH=90% max. without condensation) and the temperature within the range from -10°C to +40°C. The power supply shall be mounted in a close casing (a cubicle, a terminal device) and in order to fulfill LVD and EMC requirements the rules for power supplies, encasing and shielding shall be observed according to application.

2.2. Installation procedure.

- 1. Connect the DC output to the load/loads.
- 2. Connect the power supply unit to the ~230 V line. The power supply has to be installed in such way to keep the air flow around the supply unit.
- 3. After tests and operation control are performed, the casing (cubicle) shall be closed etc.

3. Maintenance.

Any and all maintenance operations may be performed following the disconnection of the power supply from the power network. The power supply does not require any specific maintenance procedures, however, in the case of significant level of dust, it should be cleaned with the compressed air.

WEEE MARK

According to the EU WEE Directive – It is required not to dispose of electric or electronic waste as unsorted municipal waste and to collect such WEEE separately
