~230 V mains supply voltage measurement	-	YES
LCD optical indication	-	YES
Tamper indicating enclosure opening	-	YES

PSU features:

- In accordance with standards: EN 54-4:1997+AC:1999+A1:2002+A2:2006, EN 12101-10:2005+AC:2007
- 27,6 V DC/ 3 A uninterruptible power supply
- battery housing for two 17 Ah/12 V batteries
- independently protected outputs AUX1 and AUX2
- high efficiency 84%
- low level of voltage ripple
- microprocessor-based automation system
- intelligent PSU overload protection
- measurement of the resistance of the battery circuit
- automatic temperature-compensated charging
- battery test
- two-stage battery charging process
- accelerated battery charging
- monitoring of the continuity of the battery circuit
- monitoring of the battery voltage
- monitoring of the battery fuse
- monitoring of charging and maintenance of the batteries
- deep discharge battery protection (UVP)
- battery overcharge protection
- battery output protection against short-circuit and reverse connection
- monitoring of the load current
- output voltage control
- fuse monitoring of AUX1and AUX2 outputs
- ~230 V mains voltage measurement
- "SERIAL" communication port with implemented MODBUS RTU protocol
- Power Security" is a free application for remote monitoring of power supplies (for PC and Android Phones)
- remote control (options: Ethernet, RS485)
- remote battery test (required additional modules)

- cooperation with optional EN54-LB4 or EN54-LB8 fuse modules
- optical indication of PSU overload OVL
- acoustic indication of failure
- adjustable delay for ~230 V power loss indication
- · relay output of collective failure ALARM
- input of collective failure EXTi
- · controlled relay output EXTo
- technical inputs/outputs with galvanic isolation
- EPS technical output indicating ~230 V power loss
- PSU technical output indicating PSU failure
- APS technical output indicating battery failure
- · internal memory of PSU operating status
- optical indication LCD panel
 - readings of electrical parameters, including: voltage, current, resistance of the circuit, mains supply voltage
 - failure indication
 - configuration of the PSU settings from the control panel
 - two levels of password protected access
 - operation memory of the PSU
 - failure memory
 - real time clock with battery backup
- protections:
 - SCP short-circuit protection
 - OLP overload protection
 - OHP overheat protection
 - OVP overvoltage protection
 - Surge protection
 - Antisabotage protection (Tamper)
- closing the enclosure lock
- convection cooling
- warranty 5 years from the production date

General description

The buffer power supply has been designed for an uninterrupted supply of fire alarm systems, smoke and heat control systems, fire protection equipment and fire automatics requiring stabilized voltage of 24 V DC (± 15%). The PSU is fitted with two independently protected outputs AUX1 and AUX2, which supply voltage of **27,6 V DC** with a total output current:

Continuous operation Output current Imax a=2 A

Instantaneous operation Output current Imax b=3 A

In case of power loss, the PSU switches to battery power, providing uninterruptible power supply. The PSU is enclosed in a metal casing (color: RAL 3001 - red) with battery housing for two 17 Ah/12 V batteries. The PSU works with maintenance-free lead acid batteries made with AGM technology or gel technology.

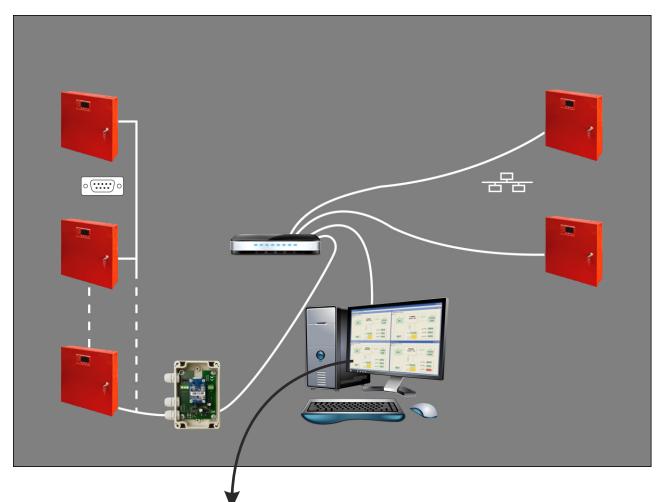

EN54/LCD series power supply unit Power supply for fire alarm systems 27,6 V DC

Functional class EN 12101-10:2007	A
Mains supply	~230 V
Current consumption	0,56 A
Power frequency	50 Hz
PSU's power	83 W
Efficiency	84%
Output voltage at	22,0 V÷ 27,6 V DC – buffer operation
20 °C	20,0 V÷ 27,6 V DC – battery-assisted operation
Output current	Continuous operation: Imax a=2 A
Maximal registeres of the bettery sireuit	Instantaneous operation: Imax b=3 A 300m Ohm
Maximal resistance of the battery circuit Ripple voltage	90mV p-p max.
	I = 65mA
Current consumption by the PSU	I = 55mA – LCD panel backlight off
during battery-assisted operation	Caution ! If the power supply is connected with the communication interface or fuse
	module, additional current consumption should be considered.
Battery charging current	1A
Coefficient of temperature compensation of the	-40mV/ °C (-5 °C ÷ 40 °C)
battery voltage Low battery voltage indication	
	Ubat < 23 V, during battery mode U>30,5 V±0,5 V - disconnection of the output voltage (AUX+ disconnection),
Overvoltage protection OVP	automatic return
Short-circuit protection SCP	
• • • • •	F5 A - F _{AUX1} , F _{AUX2} melting fuse (failure requires fuse replacement)
Overload protection OLP	Hardware - Software
Battery circuit protection SCP and reverse	F6,3 A - F _{BAT} melting fuse (failure requires fuse replacement)
polarity connection	
Deep discharge battery protection UVP	$U < 20 V (\pm 2\%) - battery disconnection$
TAMPER output indicating enclosure opening	Microswitch TAMPER
Technical outputs: - EPS FLT; indicating AC power failure	- type – electronic, max 50mA/30 V DC, galvanic isolation 1500 V_{RMS} - delay time approximately 10s/1m/10m/30m (+/-5%) – configured from the control
- EPS FLT; indicating AC power failure	panel
- APS FLT; indicating battery failure	- type – electronic, max 50mA/30 V DC, galvanic isolation 1500 V _{RMS}
- PSU FLT; indicating PSU failure	
- ALARM; indicating collective failure	- type – relay: 1 A@ 30 V DC/50 V AC
	CAUTION! In Fig.2 the set of contacts shows a potential-free status of the relay,
	which corresponds to power supply failure.
	Voltage "ON" – 10÷30 V DC
EXTi technical input	Voltage "OFF" – 0÷2 V DC
EXTo relay output	Level of galvanic isolation 1500 V _{RMS} 1 A@ 30 V DC /50 V AC
	- LEDs on the PCB of the power supply unit,

Pulsar

Remote monitoring (options: Ethernet, RS485).

The PSU has been adjusted to operate in a system that requires a remote control of the parameters in a monitoring centre. Transmitting data concerning PSU status is possible due to an additional, external communication module responsible for communication in Ethernet or RS485 standard. Different connection topologies, presented later in this chapter, are only a part of possible communication schemes. More examples can be found in the manuals dedicated to individual interfaces.

ETHERNET network communication.

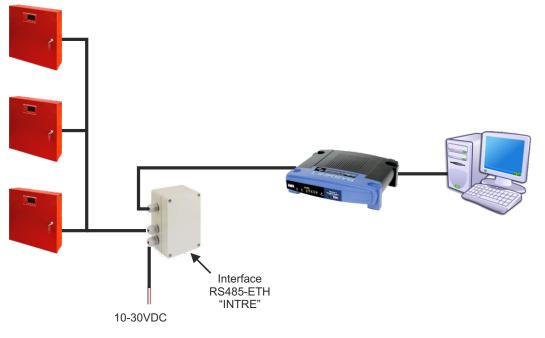

Communication in the Ethernet network is possible due to the additional interfaces: Ethernet "INTE" and RS485-ETH "INTRE", according to the IEEE802.3 standard.

The Ethernet "INTE" interface features full galvanic isolation and protection against surges. It should be mounted inside the enclosure of the PSU.

Ethernet communication using the RS485-Ethernet "INTE" interface.

The RS485-ETHERNET "INTRE" interface is a device used to convert signals between the RS485 bus and the Ethernet network. For proper operation, the unit requires an external power supply in the range of 10÷30 V DC e.g. drawn from a PSU of the EN54 series. The physical connection of the interface takes place under galvanic isolation. The unit is mounted in a hermetic enclosure protecting against adverse environmental conditions.

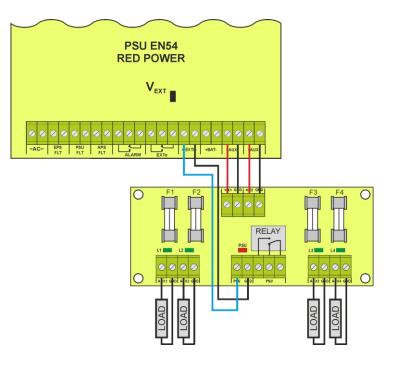

Ethernet communication using the RS485-Ethernet "INTRE" interface.

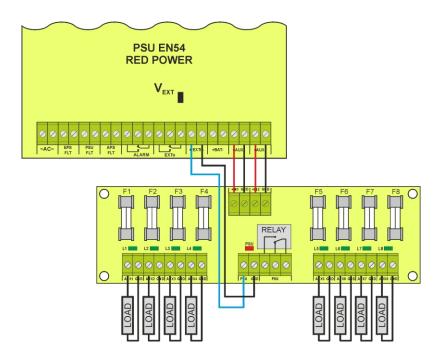

Fuse modules EN54-LB4 and EN54-LB8

Fuse modules EN54-LB4 and EN54-LB8 allow to connect 4 or 8 receivers to the PSU. Output state is indicated by green LEDs.

Blown fuse signal is transmitted to the input of collective failure EXTi (ALARM) and saved in the internal memory of PSU. The PSU's relay output can also be used for remote control, including external optical indication.

The connection of fuse module: EN54-LB4.

The connection of fuse module: EN54-LB8.
